Your guide to
CHOOSING COLOUR
for Aluminium Joinery

DURALLOY

GENERATION 2

Duralloy®, exquisite colours for Aluminium Joinery

This Colour Guide incorporates the very latest in powder coating technology coupled with the latest colours this technology makes possible. The colour range is chosen from old favourites and the very latest international colour trends and are arranged in a manner designed to make harmonious colour selection much easier.

more inspired colour choice

The Duralloy® colours shown in this guide have been specifically chosen by Dulux for their exterior durability and fade resistance. Depending on the chosen colour, the finishes available are either matt or satin, in either solid or pearlescent as replicated in the colour choice sections that follow.

It is recommended when choosing powder coating, to decide on a colour that will compliment both the exterior and the interior of your home.

specifying exactly the right colour

On occasions, some colours, whether powder, paints or furnishings may share the same colour name but be entirely different. This is especially true of other powder suppliers who use Dulux® colour names for their products, but the colours rarely match. When choosing colours, remember to specify both the Dulux® colour code and colour name.

Every effort has been made to present these colours as accurately as possible and as close as modern printing processes allow. Colour appearance may vary according to light source. Where colour accuracy is vital, a powder coated panel should be requested to more accurately demonstrate the effect you should get.

roofing colour co-ordinates

In New Zealand a number of pre-coated steel options are offered for roofing.

The Duralloy® range incorporates a range of colours designed to harmonise with these colours, but it should be noted that the powder coating colour will never be a perfect match to the roofing colour.

A number of brands of pre-coated steel in New Zealand offer colours with the same names, including New Denim Blue, Permanent Green, Terracotta, Karaka, Ironsand to name a few, but as these colours are supplied by different paint companies and are wet paint as opposed to powder coating, the colours will always only be similar at best and may vary from brand to brand.

Please check with your roofing company to determine that the colour chosen is available in the roofing material desired and check their colour against the Duralloy® co-ordinate.

premium pearls

This small range of exclusive pearls, has been especially formulated to provide a powder coated finish of the highest standards, both from a technical perspective and also from an aesthetic perspective.

These coatings utilise the latest Kinetic® technology, to provide coatings of outstanding uniformity of colour and appearance whilst the pigmentation selected for use in producing these finishes has been selected because of their unique combination of sparkle and durability. The technology behind the products has been thoroughly tested and deemed especially fit to wear the Dulux® Duralloy® brand name.

Our Premium Pearls range may be a little more expensive than the usual run of the mill colour, but then these are not your usual run of the mill colours!

DURATEC®

This selection of Premium Pearls is also available in our Duratec® technology, please check with your representative for availability.

Please take the time to check an actual powder coated sample of the colour of your choice.

reflections

An intelligent infrared reflective coating.

A portion of sunlight is visible to the human eye and it is these wavelengths we see as colours. Other solar wavelengths however are invisible to us, yet we know they exist because we feel their effects everyday. UV rays for instance are full of energy and are what causes sunburn. Infrared light however is less energetic but comprises a large percentage of the solar energy that actually reaches the earth.

All light whether visible or invisible will heat up an object that absorbs it. The more solar energy an object absorbs the hotter it will get. By contrast the more solar energy an object reflects the cooler it will remain.

Two objects can appear to be identical in colour yet have very different solar reflectance characteristics especially when it comes to IR light. As IR light makes up over 50% of the energy from the sun that reaches the earth, it is the ability of an object to reflect IR light not its colour that is paramount when it comes to remaining "cool". We can measure this effect as an object or a coatings "Total Solar Reflectance" value. (TSR)

The formulas used to manufacture the reflections range use very specific raw materials to produce colours that have excellent TSR values as the graph below clearly shows.

Why is a cooler reflections coating better ?

- Cooler products last longer. Heat accelerates the chemical degradation process, which we see as a loss of gloss, excessive or rapid colour fade, and poor physical properties. Staying cooler even by a small amount slows this degradation process down considerably and the coating retains its appearance for a longer period of time.
- Cool saves energy. The less heat transmitted to the interior of a building means less energy is required to keep it cool.

Please take the time to check an actual powder coated sample of the colour of your choice.

brown

Browns are now the current popular flavour, and in the Duralloy® Colour Guide, we have browns in abundance. From deep rich browns such as Lignite or Ironsand, to lighter beiges such as Dusty Trail, Desert Sand and even Pearlescent browns on the Metropolis® Pearl pages such as Mineral Brown and Electric Cow.

blue

Blues are the cool, clear colours of the sea and sky. They are aristocratic colours that can suggest peace and harmony or add a bold accent in furnishings or trim. Blues can cool a warm room, or provide a contrast to the hot colours of an arid landscape.

Please take the time to check an actual powder coated sample of the colour of your choice.

white /
cream

White in its purest form can be stylish and cool or stark and demanding. This is responsible for its enduring popularity as a trim colour and as a main decorating theme. Works of art, collections and fabrics are all presented to advantage in a white environment.

&
beige /
yellow

Beige is classical, soothing and commonly used in conjunction with earth tones to create an atmosphere of peace and serenity.

From sandy beige to rich ochre's, yellow radiates warmth and friendliness.

DENOTES: ALSO AVAILABLE AS A
DURATEC® STOCK COLOUR

Duralloy® Metropolis® Pearls deliver a vibrant, animated effect, ideal for use as a trim colour to enhance the total colour scheme. Duralloy® Metropolis® Pearls have been carefully chosen for their X factor, that special quality that allows this range of pearls to blend in harmony with a wide range of solid colours, turning standard architectural devices into features.

The Precious® range of Pearlescent colours were designed to offer an alternative to anodising. Metropolis® and Precious® Pearls attract the Dulux® Duralloy® Warranty.

Please take the time to check an actual powder coated sample of the colour of your choice. For technical reasons associated with colour reproduction, the colours shown give only an indication of shade. No guarantee can be given that they will exactly match the powder product.

black

The most powerful colour, although technically not a colour at all, black can conjure up images of mystery, or elegance and sleek sophistication. The strength of black is often emphasised by using it with white. Black and white tiles, or a high gloss black front door convey a universal message of style and sophistication.

& grey

In theory grey is the only true neutral, but in practice grey's come from all around the spectrum. Grey's work well with yellows and reds, are subtly unobtrusive with creams and blues and sumptuously sophisticated in combination with light yellows and beige.

Please take the time to check an actual powder coated sample of the colour of your choice.

red

Reds, Corals & Pinks are warm, vibrant colours that create a sense of intimacy and strength. Ranging from soft shades of coral and pink to bold, aggressive reds, these are colours that should be used with care. The paler tones are cheerful colours that reflect light to warm or brighten cool or dark rooms.

&
light grey

Grey, which like black is a non-colour, is the true neutral, and thus risks being bland and uninteresting. However, when the right tone is selected, anywhere from charcoal or slate through to soft dove, grey can be an ideal backdrop, or accent in practically any colour scheme.

Please take the time to check an actual powder coated sample of the colour of your choice.

green

Currently the most popular decorating colour, green symbolizes nature. It is the easiest colour on the eye and can improve vision. It is a calming, refreshing colour. People waiting to appear on TV sit in "green rooms" to relax. Hospitals often use green because it relaxes patients. Dark green is masculine and conservative. Greens can be fresh & minty, acid lime or warm and relaxing olives.

Please take the time to check an actual powder coated sample of the colour of your choice.

mannex

The Duralloy® Mannex® range has been designed especially for entrance doors, to add an extra little pizzazz to an area that is often a feature in terms of colour and design.

The Duralloy® Mannex® Range have been specially formulated as a tactile textured finish, that plays with the light and gives depth and interest to the surface. These specially chosen finishes have been formulated to be a hard durable film that displays a depth of character in the textured finish but also resists scuffing. With entrance doors often protected from the weather, rain seldom strikes the surface so new technology has been embodied in the Duralloy® Mannex® range giving the powder coating easy clean properties.

ADDITIONAL COLOURS AVAILABLE IN THE MANNEX® RANGE

MANNEX® ARCTIC WHITE
MANNEX® WARM WHITE PEARL
MANNEX® OFF WHITE
MANNEX® BONE WHITE G2

*Please take the time to
check an actual powder
coated sample of the

performance and quality assurance

Dulux Powder & Industrial Coatings, manufacturer of Dulux Branded Powder Coating, is committed to providing products that strictly adhere to the ISO standard for quality management. The result is a range of powder coatings, that simply work better in New Zealand's unique climatic conditions.

Our two level performance guarantee

1. The first covers film integrity, which is a guarantee that the film will not peel, crack or flake. When applied by a Dulux Registered Aluminium Applicator, the products in this guide carry a warranty of 10 years film integrity on extruded aluminium.
2. Secondly, and one most customers assume is guaranteed is, colour performance. This is simply the ability of the coating to retain its colour and appearance within stated parameters for a given period .
The Duralloy® products featured here all have colour performance guarantees of 10 years when applied to residential aluminium sections by a Dulux Registered Aluminium Applicator.

Dulux Registered Applicators

All the warranties offered by Dulux® in this booklet are conditional on the powder coatings being applied by Dulux Registered Aluminium Applicators. These applicators are only certified after demonstrating their capability to meet stringent quality conditions and international standards. Each registered aluminium applicator has invested heavily in their business to guarantee their performance in preparing the aluminium and applying the premium Dulux® finishes shown in this guide.

powder coating warranties and the environment

- Extruded aluminium window & door joinery
- Residential and small commercial developments
- Building up to three levels above ground
- Properties greater than 100 meters from high tide level
- Where AAMA 2603 performance is desired
- Where a 10 year film and colour integrity warranty is required
- For projects outside these parameters, check with your Dulux® representative.

- Extruded aluminium window & door joinery
- Prestigious residential and commercial developments
- All major architectural developments
- Properties greater than 10 meters from high tide level
- Welded aluminium sections greater than 100 meters from high tide level.
- Where AAMA 2604 performance is desired
- Where a 15 year film and colour integrity warranty is required
- For projects outside these parameters, check with your Dulux® representative.

Do it once.. do it right..do it Dulux

care & maintenance

To comply with warranty requirements and to extend the effective life of powder coatings, a very simple regular maintenance programme should be implemented.

- 1/ Carefully remove any loose deposits with a wet sponge.
- 2/ Use a soft brush (non abrasive) and a mild household detergent solution to remove dust, salt and other deposits.
- 3/ Rinse off with clean fresh water.

Do remove obvious deposits as they occur.

Do mask windows if painting.

Use only Methylated Spirits, Isopropanol or water to remove fresh paint splashes.

Do not use abrasive-steel wool, scrapers, scouring liquids or powders to remove paint splashes - these will damage your powder coating.

Do not use aggressive solvents-thinners, petrol etc. these solvents will attack gloss levels and reduce the powder coatings life expectancy.

Do not expose your joinery to excessive heat- heaters or hot air guns - these may damage the powder coating. If through some misadventure your powder coated aluminium joinery is scratched or damaged, don't panic. Dulux® colour Repair Kits are available.

Do contact Dulux® Powder & Industrial Coatings on 0800 800 975 for further information or advice.

Take care at installation time

Your window manufacturer puts considerable effort into protecting your powder coated joinery right through to installation time, however it is at this time that your joinery is perhaps most at risk of damage. For this reason your window manufacturer uses stickers, recommended by the Window Association of New Zealand, to help to protect their product.

These stickers read:-

"IMPORTANT ALL TRADES"

This valuable aluminium joinery will suffer **permanent** damage from: plaster, mortar and paint splashes - **Protect** if splashes occur - **Immediately** wash down joinery with water or meths - **Do not** allow splashes to harden! - **Do not** use solvents! - **Do not** remove this label until final clean completed.

All the activity on a construction site means that your window joinery may get knocked or scratched, splattered with mortar, plaster, textured coating or paint during the later stages of construction. Please ensure that your window and door joinery is masked at this time. It is far easier to prevent accidents than to try and correct them. Should your joinery receive mortar or paint splashes see that these are removed before cure and follow the instruction contained in this colour card or in the Dulux® Powder & Industrial Coatings use and care brochure.

choosing

1. Consider the aspect of the room. If the light is warm, cooler colours are often the first choice. If the light is cool, warmer colours add cosiness.
2. Think about how the room is to be used and the atmosphere you want to create.
3. Select your main colour. Use existing furnishings as a starting point.
4. Look at the balance of the colours. In general, light colours should be used in large areas, with deeper colours on a smaller area of the total room.
5. Think about using colours to change the shape of the room. Receding colours on a ceiling for instance will make the room feel taller, advancing colours will make the ceiling feel lower.

Disclaimer:

The colours in this brochure are indicative only. They are as close to actual product colours as modern printing techniques allow and they have been matched in natural outdoor lighting conditions. Colour appearance may vary according to light source.
